

Embodied AI researcher & simulation engineer specialising in motor control and robotics using RL policies grounded in neuromechanics.

Work Experience

- 2025 - **Postdoctoral Researcher, Imperial College/Meta Wearable Neural Interfaces Research Centre:** Developed neuromechanical models of the hand, and its control policies using RL. Built experimentally validated, closed-loop neural signal synthesis pipeline in massively parallelized simulated environments. Achieved 100x speedup (100k+ sps) by parallelizing via **JAX** and **Warp** on **HPC** clusters.
- Led Imperial's contributions on multiple **grant applications** in robotics and sensor manufacturing projects that met excellence requirements, securing over **€800k** in funding. Developed and iterated on a robotic hand's digital twin from **Fusion360**, **Blender** and **Python** to generate **MJCFs** and extended the simulation with a prototype arm's model. Developed **robotic hand simulation environment** controlled by users in real-time VR to test human-machine interfacing devices. Co-designed **Unity-based image data synthesis** pipeline for object detection and **hand preshaping** system for robotic grasping.
- 2023-25 **Contractor, Google DeepMind:** Contributed **bug-fixes and PRs** to MuJoCo and related open-source projects. **Developed features** for the **Unity** plugin to the **MuJoCo** physics engine. Contributed a **system identified compliant robotic end-effector** model to MuJoCo Menagerie.
- 2023 **Research Intern, Artanim Foundation:** Investigated social spacing in virtual environments. Developed tools and processes for physics-based animation and locomotion simulation. Implemented interactive environments in VR using Unity. Planning and performing full-body, **multi-actor motion capture sessions** for motion-tracking datasets.
- 2017-24 **Teaching assistant:** Leading seminars and tutorials, creating and presenting lecture content, planning and grading coursework. Lead TA for Human Neuromechanical Control and Learning at ICL.

Education & Research Experience

- 2020-24 **PhD project, Imperial College London (Bioengineering Research):** Learnt **locomotion** using intent-driven, **compliant robotic** legs in simulated **RL** environments. Agents trained to maintain dynamic balance on **challenging terrain**, with realistic torque limits. Collected experimental kinematic and kinetics datasets and processed them with TCNs to extract high-level user intent and dynamics. **5 first-author articles published. 8 second-author articles, including in Nature Communications. 1st place presentation in category at iCBEI22.**
- Co-first author of two **NeurIPS** competitions (MyoChallenge24/25), designed RL environments (including **bimanual manipulation**) and reward-hacking resistant evaluation metrics (partially through **domain randomisation**) for 100+ competing teams. **Published in NeurIPS 2025, 2026, and ICORR 2025.** Developed and implemented features to utilise hardware accelerated parallelised simulation of these open-sourced environments. Contributed to procedural programmatic model composition pipeline using the Python **MjSpec** API of MuJoCo.

2019-20 **MEng Biomedical Engineering, Imperial College London:** Projects included building accessible UI for controlling a robotic arm, and CNN-based image processing. Built a data loading, systematic training and documentation systems for my thesis project; EMG based **kinematics prediction** and **activity classifier**. Projects presented at AAATE18, BioMedEng19/22 conferences. **First class honours**, Dean's list.

Skills

- **Simulation & RL:** MuJoCo, JAX, Warp, Brax, IsaacLab, Unity (C#), GPU-parallelisation, reward shaping, domain randomization, scene creation via Unity, Blender, converting between URDF and MJCF. Familiarity with physics engines e.g. Genesis, Bullet, SimBody and PhysX.
- **Technical skills:** Signal processing, human-machine interfacing, supervised and reinforcement learning, information theory, gait analysis, motion capture, optimal control, system-identification
- **IT:** Python, C#, Git, C++, ROS, CI/CD pipelines, unit testing
- **Entrepreneurship:** Trained on managing and protecting IP, regulations and tech transfer. Worked with **startups/companies** at different stages (e.g. Neubond, Artanim), making simulations and visualisations they used for fundraising and outreach.
- **Communication:** Experience as teaching assistant, PhD student society chair. **Designed and led three-day workshops on simulating robotics at Summer School of Neurorehabilitation 2023-26.**
- **Supervision:** Contributed to and advised student projects involving **exoskeleton control, teleoperation, tactile sensing**, IMU based motion capture, uncertainty modelling. I supervised a student adapting my framework for **vision-based control simulation of a Unitree H1 over varying terrain**.

Other Interests and Successes

- **Released an open-source [RL-based locomotion learning toolkit](#), [written interactive tutorials](#) and a [robotics modelling utility](#).**
- Contributed peer reviews to multiple journals including Science Robotics, multiple IEEE journals and Wearable Technologies.
- Personal Projects: Arduino and Raspberry Pi electronics projects, programming video games, image processing apps. Organising chair of the CDT Prosthetics & Orthotics Conference 2021.
